

SPA CIELE

LOCATION: 1230 MANSFIELD, MONTREAL, QC

AREA: 25 000 SQ FT

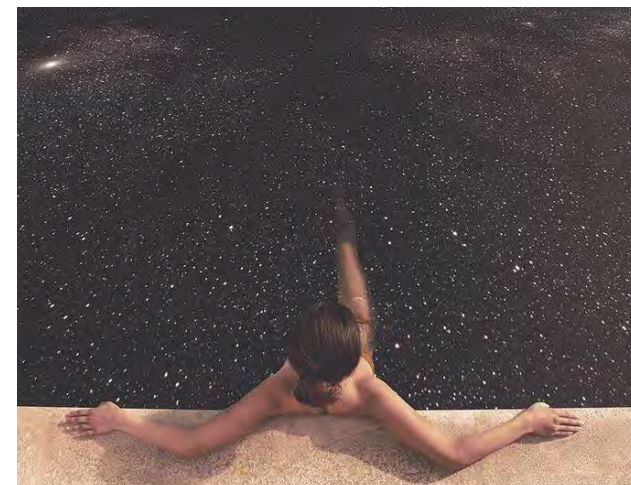

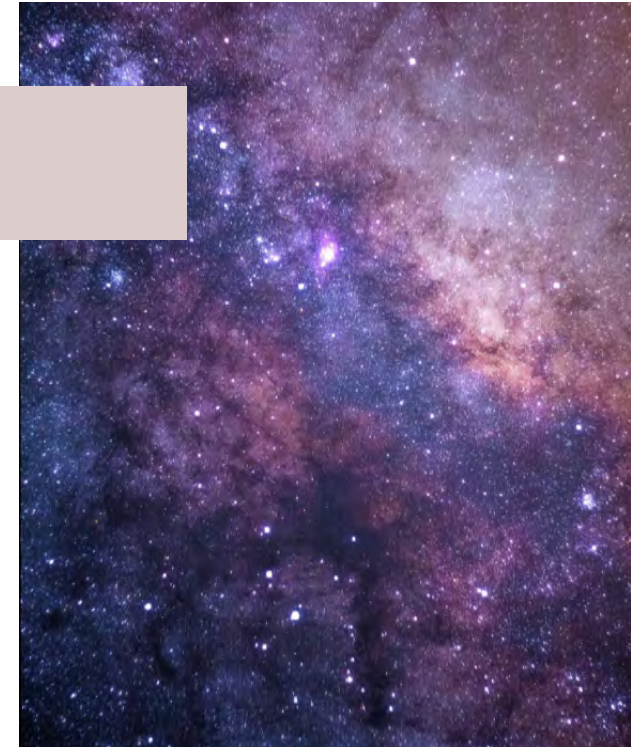

COMPLETED: December 2018

Project partner: Melissa Hu

Spa Ciele offers an **immersive sensory experience** combining the serenity of a spa with the invigorating video projections of space imagery, aiming to transport the mind and body to a different galaxy. The combination of floating in water and outer space imagery convey a sense of **weightlessness**, where gravity has no control over the human body, allowing one's inner self to feel elevated.

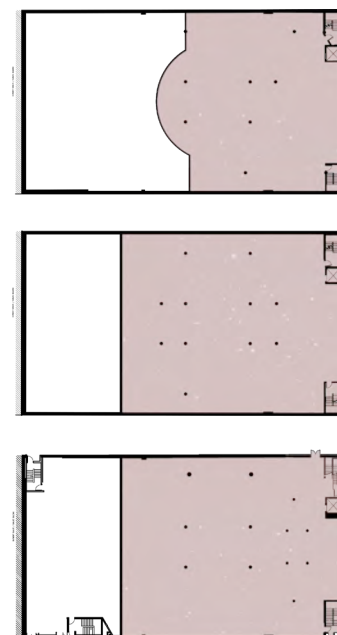

Guests can enjoy various pools, steam rooms, and saunas, each with their own skyscape projection or **celestial** ambiance. Projections of meteor showers, aurora borealis, and other space phenomena are constantly in motion, and clients are encouraged to look up. The **planetarium-inspired** design encompasses three floors and a large signature dome at the top; its projections can be admired from all levels. The second floor contains several enclosed spaces to explore, where guests can have a more **introspective** experience and secluded conversations. The third level is an open space designated for socialization, equipped with its own bar known as The Observatory, which offers seating both in and outside of the pool.

Located in the heart of downtown in the Mansfield building, this spa attracts locals, tourists, groups, singles, and stargazers alike.
